

WEB DEVELOPMENT PROJECT

BSIS/BSIT 3rd Year – HTML, CSS, JavaScript Projects

Website Development & Deployment Guide

PHASE 1

A. Required Tools

Tool	Purpose	Link
Visual Studio Code	Code Editor	https://code.visualstudio.com
Git	Version control	https://git-scm.com
GitHub	Hosting & collaboration	https://github.com
Web Browser	Testing	Chrome, Firefox, Edge, etc.

B. Local Development Setup

1. Install Visual Studio Code
 - a. Download and install VS Code.
 - b. Recommend extensions:
 - Live Server
 - Prettier
 - GitHub Copilot (optional)
2. Create Your Project Folder
 - a. Name it after your chosen company (e.g., GreenTech_Website)
 - b. Inside the folder, create:
 - index.html – homepage
 - style.css – styling
 - script.js – interactivity
 - assets/ – images, icons, etc.
3. Build Your Website
 - a. Use HTML for structure
 - b. Use CSS for styling
 - c. Use JavaScript for interactivity
 - d. Test locally using Live Server:
 - Right-click index.html → “Open with Live Server”

C. Version Control with Git

4. Initialize Git Repository

- Open terminal in VS Code and run:

```
git init
git add.
git commit -m "Initial commit"
```

5. Connect to GitHub

Create a new repository • Go to <https://github.com>

- Click **New Repository**
- Name it (e.g., GreenTech_Website)
- Set to **Public**
- Click **Create Repository**
- Copy the remote/repository URL
- in VS Code terminal, Run:

```
git remote add origin https://github.com/yourusername/your-repo-name.git
git push -u origin master
```

or

```
git remote add origin https://github.com/yourusername/your-repo-name.git
git branch -M main
git push -u origin main
```

D. Deploy via GitHub Pages

6. Enable GitHub Pages

- Go to your repository → Settings → Pages
- Source: Select main branch → /root
- Click **Save**
- Your site will be live at:
<https://yourusername.github.io/your-repo-name>

E. Final Checklist Before Submission

Task	Status (✓/ X)
Website loads correctly	
Responsive layout (mobile-friendly)	
Navigation and links work	

JavaScript features function properly	
GitHub repo is updated	
GitHub Pages link is active	

Tips for Success

- Use semantic HTML (<header>, <section>, <footer>)
- Organize CSS with comments and consistent naming
- Keep JavaScript modular and readable
- Test on multiple browsers and screen sizes
- Document your code and commit messages clearly
- Watch this video for an additional guide -
